No ORF has yet been conclusively identified within the present sequence. The 5' ESTs were prepared from total human RNAs or polyA+ RNAs derived from 30 different tissues. EST sequences usually correspond mainly to the 3' untranslated region (UTR) of the mRNA because they are often obtained from oligo-dT primed cDNA libraries. Such ESTs are not well suited for isolating cDNA sequences derived from the 5' ends of mRNAs and even in those cases where longer cDNA sequences have been obtained, the full 5' UTR is rarely included. 5' ESTs are derived from mRNAs with intact 5' ends and can therefore be used to obtain full length cDNAs and genomic DNAs. 5' ESTs are also used in diagnostic, forensic, gene therapy and chromosome mapping procedures. They are used to obtain upstream regulatory sequences and to design expression and secretion vectors
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                cardiovascular; respiratory; gene therapy; secreted protein; chromosome identification; hybrid mapping; gene expression control; immune system disorder; immunodeficiency; Chediak-Hjgashi syndrome; autoimmune disease; systemic lupus erythematosus; rheumatoid arthritis; multiple sclerosis; haemolytic anaemia; myasthenia gravis; allergic reaction; asthma; inflammatory condition; inflammatory bowel disease; B cell stimulator; T cell activator; blood-related disorder; eosinophilia; thrombosis; thromboembolism; atherosclerosis; myocardial infarction; angina; anaemia; hyperproliferative disorder; cancer; renal disorder; chronic kidney failure; renal tubular acidosis, kidney stone;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               immunomodulator; immunosuppressive; antiinflammatory; dermatological; antiarthritic; antirheumatic; neuroprotective; antianaemic; muscular; antiallergic; antiasthmatic; gastrointestinal; anticosqulant; thrombolytic; antiarteriosclerotic; cardiant; cytostatic; nephrotropic;

```

The invention describes novel human secreted proteins and the nucleotides encoding them. The polynucleotides are useful in chromosome identification, for radiation hybrid mapping, in controlling gene expression, in gene therapy or as molecular weight markers. The polynucleotides and polypeptides are useful for diagnosing, treating or preventing diseases of the immune system, immunodeficiencies, e.g. Chediak-Higashi syndrome, autoimmune diseases, e.g. systemic lupus erythematosus, rheumatoid arthritis, multiple sclerosis, haemolytic anaemia or myasthenia gravis, allergic reactions, e.g. asthma, inflammatory conditions, e.g. inflammatory bowel disease. They can also be used as a stimulator of B cell responsiveness to pathogens or as an activator of T cells. The polynucleotides and polypeptides are also useful for treating or preventing blood-related disorders, e.g. eosinophilia, thrombosis, thromboembolism, atherosclerosis, myocardial infarction, unstable angina or anaemia. They can also be used for treating, preventing or diagnosing hyperproliferative disorders (chronic kidney failure, renal tubular acidosis or kidney stones), cardiovascular disorders or respiratory disorders. This sequence represents a novel human secreted protein

                                                                                                                                                                                                                                                                    example, they may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of (I) by expressing inactive proteins or to supplement the patients own production of (I). Additionally, (I) polynucleotides may be used to produce the secreted (I), by inserting the nucleic acids into a host cell and culturing the cell to express the protein. (I) proteins and polynucleotides may be used to prevent, diagnose and treat immune/haematopoietic-related diseases, especially cancers and cancer metastases of haematopoietic-derived cells. AAK64703 to AAK87694 represent human immune/haematopoietic antigen genomic sequences from the present invention. AAK84942 to AAK84950 and AAM82169 represent sequences used in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                      amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic activity, and can be used in gene therapy and vaccine production. (I) proteins and polynucleotides may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate (I) expression. For
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Nucleic acids encoding human immune/hematopoietic antigen polypeptides, useful for preventing, diagnosing and/or treating cancers and metastasis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            17-NOV-2000;

(II) is cuseful for generating antibodies against it, detecting or quantitating a colving country of the protein expression of the sequence and as a food complement. (II) and its binding partners are useful in medical imaging cof sites expressing (II). (I) and (II) are useful for treating disorders covolving aberrant protein expression or biological activity. The complement of the invention of the triatist of assess biodiversity and to produce other types of data and products dependent on DNA and compared to produce other types of data and products dependent on DNA and coming sequences of the invention. Note: The sequence data for this catenit did not appear in the printed specification, but was obtained in clectronic format directly from WIPO at control of the country pub/published_pct_sequences

The invention relates to a novel polymucleotide encoded by a phenotype CC associated (PA) gene. The polymucleotide is selected from 292 sequences CC comprising 301-1002 base pairs (AD081204) given in the CC specification, with allelic variation contained in a functional CC surrounding like full length cDNA for PA gene polypeptide and with or CC without the PA gene promoter sequence. A polymucleotide of the invention has cardiant activity, and acts as a phenotype-associated gene modulator. The reagent of the invention is useful for preparing a medicament The CC method of the invention is useful for preparing a medicament tailored to suit a patient's individual response to statin therapy. The genetic CC polymorphisms are useful for assessing the response to lipid lowering CC drug therapy and adverse drug reactions of the medicaments, particularly for assessing cardiovascular risks in humans e.g. atherosclerosis, cischaemia/reperfusion, and stroke. The genetic polymorphisms are also useful for identifying compounds for treatments of cardiovascular disease compounds for treatments of cardiovascular disease and as templates for the recombinant production of normal variant peptides or polypeptides of the recombinant production of normal variant peptides or polypeptides of the genes. The present sequence represents a polynucleotide of the present sequence.

The Zmax1 and HBM genes have osteopathic activities. The genes can be used in gene therapy, antisense therapy and in the production of vaccines. They can be used in the diagnosis and treatment of bone disorders including osteoporosis, paget's disease, sclerostosis, osteomaliacia and fibrous dysplassia.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to novel transgenic animals expressing the high CC bone mass (HBM) gene, expressing the corresponding wild type HBM gene, comprising an alteration of the gene encoding LRP5 or LRP6, or expressing CC an LRP5 that is modulated by an altered gene control sequence introduced by homologous or non-homologous recombination. The transgenic animals are CC for the study of bone density modulation or bone mass modulation. The CC invention has osteopathic and cytostatic activity. The polynuclectides of the invention may have a use in gene therapy. The transgenic animals and CC uncleic acids are for the study of bone density modulation, where the CC bone mass is modulated relative to non-transgenic animals of the same CC strength, trabecular number, bone size, or bone tissue connectivity. The CC transgenic animals, nucleic acids and methods are useful for identifying molecules involved in bone development, and for developing pharmaceutical compositions, which may be employed for treating or preventing bone CC diseases, e.g. osteoporosis, osteomalacia, rickets, Paget's disease, or neoplasms of the bone. The transgenic animals and nucleic acids are also useful in methods for diagnosing diseases involved in bone development, or characterised by reduced bone density or mass. The present sequence is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      문
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Matches

The invention relates to an isolated amino acid protein sequence selected from an amino acid sequence appearing as ADR16922 or an amino acid sequence comprising or consisting of the extracellular domain of ADR16922 (amino acids 23-1385). ADR16922 is encoded by the HBM (high bone mass) allele of the human Zmax1 gene and has sequence similarity to LDL receptors. Also disclosed are nucleic acids, proteins, cloning vectors, expression vectors, transformed hosts, methods of developing

Example 2; SEQ ID NO 10; 284pp; English.

pharmaceutical compositions, methods of identifying molecules involved in bone development, and methods of diagnosing and treating diseases involved in bone development. Specifically disclosed is the Zmax1 gene

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention relates to regulating LRP5, LRP6 or HEM activity is a subject comprising administering a composition which modulates a Dkk activity. The method is useful for modulating lipid levels and/or bone mass, and is useful in treating or diagnosing abnormal lipid levels and bone mass disorders, such as osteoporosis, bond fracture, age-related loss of bone, a chondrodystrophy, drug-induced bone disorder, high bone turnover, hypercalcaemia, hyperostosis, osteogenesis, imperfects, osteomalacia, osteomyelitis, Paget's disease, osteoarthritis, and rickets. Modulators of Dkk activity are useful for as reagents in studying bone mass and lipid level modulation, in modulating Wnt signaling, or treating Dkk-mediated disorders. The present sequence represents a human DNA sequence related to the invention.
                                                                                                                                                                                     New high bone mass gene of chromosome 1.1Q13.3, encoding protein useful for treating, diagnosing, preventing, or screening for normal and abnormal conditions of bone, including metabolic bone diseases, e.g.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Human; high bone mass; Zmax1; ds; BAC; HBM; osteoporosis; chromosome 11q13.3; osteopathic; LDL receptor; bone devel metabolic bone disease; bacterial artificial chromosome.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  8
               high bone mass protein (HBM). The gene exists in two alleles, Zmaxi, the contional wild-type (the cDNA for which appears as ADR47570 encoding ADR47572) and the HBM allele (the cDNA for which appears as ADR47571 encoding ADR47573). The two alleles differ by a single nucleotide polymorphism (G to T at position 582 of ADR47570) causing a Gly to Val change at position 171 of the protein. Also included are a replicative claning vector comprising HBM/Zmaxi (and a replican operative in an isolated host cell), an expression vector comprising HBM/Zmaxi operably linked to a transcription regulatory region, an isolated host cell transformed with the vector(s), a method for testing a substance as a therapeutic agent for bone modulation in a host, a method of identifying a molecule involved in bone modulation, a method for testing for HBM activity, a method of developing a pharmaceutical for the treatment of bone development disorders, a method for treating a bone development in a host.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Query Match

The protein is useful for treating, diagnosing, preventing, or screening for normal and abnormal conditions of bone, including metabolic bone diseases, e.g. osteoporosis. The present sequence is a BAC (bacterial artificial chromosome) containing part of the Zmax1 gene.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence 8705 BP; 2107 A; 2317 C; 2399

The nucleic acid molecule and the encoded polymorphic site from HBM/Zmax1. The nucleic acid in diagnosing, treating and preventing a bone development disorder, i.e. osteoporossis. The gene for HBM/Zmax1 is located on chromosome 11q13.3. The present sequence is an HBM DNA from a bacterial artificial
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  13-JAN-1998;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           10.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              0
```

The present invention relates to a method (M1) for identifying a candidate molecule involved in bone modulation. The method comprises identifying a molecule that binds to High Bone Mass protein (HBM) and/Zmax1 protein. The HBM gene exists in two alleles: Zmax1, the notional wild-type (the cDNA for which appears as AEB6929 encoding AEB69301 an AEB69300 encoding AEB69302). The two alleles differ by a single nucleotide polymorphism (T to G at position 582 of AEB69299)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      protein has the property of causing elevated bone mass, while the Zmax1 protein does not. The gene for HBM/Zmax1 is located on chromosome 11q13.3. Also claimed is a method of pharmaceutical development for treating of bone development disorders, such as osteoporosis, osteomalacia, bone fractures, Paget's disease, etc., which comprises identifying a molecule that binds to the Zmax1 protein, or to HBM, or both. The present sequence was used to illustrate the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   17-JAN-2001;

(I) have cytostatic antiyity, and can be used in gene therapy and vaccine production. (I) coroteins and polynucleotides may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate (I) expression. For cc example, they may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome cc that affect the activity of (I) by expressing inactive proteins or to supplement the patients own production of (I). Additionally, (I) cc polynucleotides may be used to produce the secreted (I), by inserting the nucleic acids into a host cell and culturing the cell to express the corotein. (I) proteins and polynucleotides may be used to produce the secreted (I), by inserting the corotein. (I) proteins and polynucleotides may be used to prevent, cc diagnose and treat immune/haematopoietic-related diseases, especially cc cancers and cancer metastases of haematopoietic antigen genomic to AAX87694 represent human immune/haematopoietic antigen genomic the corotein invention. AAX54942 to AAX54950 and AAM82169

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           CC ankino acid sequences given in AAM82170 to AAM91921. (1) have cytostatic cartivity, and can be used in gene therapy and vaccine production. (I) CC activity, and can be used in gene therapy and vaccine production. (I) CC proteins and polynucleotides may be used in the prevention, diagnosis and CC treatment of diseases associated with inappropriate (I) expression. For CC example, they may be used to treat disorders associated with decreased CC expression by rectifying mutations or deletions in a patient's genome CC that affect the activity of (I) by expressing inactive proteins or to supplement the patients own production of (I). Additionally, (I) CC supplement the patients own production of (I). Additionally, (I) CC concers and treat immune/haematopoietic may be used to prevent, (CC diagnose and treat immune/haematopoietic-related diseases, especially CC cancers and cancer metastases of haematopoietic acids and AAK64703 CC sequences from the present invention. AAK54942 to AAK54950 and AAM62169 CC represent sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Query Match

ARK54951 to ARK64702 encode the human immune/haematopoietic antigen (I) camino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic cc activity, and can be used in gene therapy and vaccine production. (I) cc proteins and polynucleotides may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate (I) expression. For cc example, they may be used to treat disorders associated with decreased cc expression by rectifying mutations or deletions in a patient's genome cc that affect the activity of (I) by expressing inactive proteins or to cc supplement the patients own production of (I). Additionally, (I) cc polynucleotides may be used to produce the secreted (I), by inserting the cc mucleic acids into a host cell and culturing the cell to express the cc protein. (I) proteins and polynucleotides may be used to prevent, cc diagnose and treat immune/haematopoietic-related diseases, especially cancers and cancer metastases of haematopoietic active cells. AAK64703 cc AAK87694 represent human immune/haematopoietic antigen genomic

                                                                                                                                                                                                                                                                                                                                                                                      The present invention provides the protein and coding sequences of number of human reproductive system related antigens. These can be in the prevention and treatment of reproductive system disorders, including cancer. The present sequence is a genomic sequence encoding protein of the invention

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention provides the protein and coding sequences of 973 human testicular antigens, and fragments of their genomic sequences. The sequences can be used in the treatment of cardiovascular, urinary system, reproductive system, immune, respiratory, neurological and gastrointestinal disorders, infections, and particularly cancer, especially testicular cancers. The present sequence is a DNA encoding a

Sequences AAS2991-AAS30164 represent genomic DNA molecules, which encode the lung antigen polypeptides of the invention. Lung antigen polypeptides and their associated polymucleotides are useful in the diagnosis, treatment and prevention of various types of disorders in e.g. humans, mice, rabbits, goats, horses, cats, dogs, chickens or sheep. A pathological condition can be determined by detecting the presence or absence of a mutation in a lung antigen polynucleotide. The treatable disorders include autoimmune diseases such as rheumatoid arthritis, hyperproliferative disorders such as neoplasms of the breast or liver, cardiovascular disorders such as cardiac arrest, cerebrovascular disorders such as cardiac arrest, cerebrovascular disorders such as cardiac arrest, cerebrovascular of liver, cardiovascular disorders such as cardiac arrest, viruses and fungi, ocular disorders such as corneal infection, endocrine disorders such as premature labour and infertility, gastrointestinal disorders such as corneal alignyders such as corneative and such as corneative and an endocrine such as premature labour and infertility, gastrointestinal disorders such as

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      respiratory disorders such as asthma and pleurisy. The polypeptides can also be used to aid wound healing, to prevent skin aging due to sunburn, to maintain organs before transplantation, to regenerate tissues and in chemotaxis. The polypeptides can also be used as a food additive or preservative to increase or decrease storage capabilities. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

```
The invention relates to an isolated lung antigen polypeptide sequence or composed sequence in a cDNA clone. The polypeptide and its polynucleotide are useful for treating, preventing, diagnosing and/or prognosing concepts as a cutte myelogenous leukaemias, adenocarcinoma; respiratory consoplasias e.g. acute myelogenous leukaemias, adenocarcinoma; respiratory consoplasias e.g. acute myelogenous leukaemias, adenocarcinoma; respiratory consoplasias e.g. acute myelogenous leukaemias; immunodeficiencies such as chronic rhinitis, sinusitis; immunodeficiencies such as chronic rhinitis, alvoslitis; immunodeficiencies such as chromatory disorders such as adrenalitis, alvoslitis; immune complex configuratory disorders such as serum sickness, polyarteritis nodosa; bleeding disorders concertion such as kidney failure, multiple myeloma; disorders consociated with macrophage numbers and/or macrophage function such as colon cancer; caucher's disease, Neimann-Pick disease; tumours such as colon cancer; consociated with as Albers-Schonberg disease, bowlegs; muscle consociated such as as a schone is schone in traumatic lesions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             08-NOV-2000

CC and limb regeneration; stimulates neuronal growth; can treat and prevent CC neuronal damage occurring in certain disease, Parkinson's disease, and AIDS-CC conditions, such as, Alzheimer's disease, Parkinson's disease, and AIDS-CC related complex; stimulates chondrocyte growth, thus they can be used to cenhance bone and periodontal regeneration and aid in tissue transports or CC bone grafts; prevents skin aging due to sumburn by stimulating cC enthance bone and periodontal regeneration and aid in tissue transports or CC bone grafts; prevents skin aging due to sumburn by stimulating cC enthance bone and periodotes melanocyte growth; stimulates or comports or comports or comports of the sumburn by stimulating cC growth and differentiation of hematopoietic cells and bone marrow cells when used in combination with other cytokines; maintains organs before comports or decreases the differentiation of primary tissues; cincreases or decreases the differentiation or proliferation of embryos; cc increases or decreases the differentiation or proliferation of embryos; cc increases or decreases bedy height, weight, hair colour, eye colour, cased in percentage of adipose tissue, pigmentation, size, and shape (e.g., cc skin, percentage of adipose tissue, pigmentation, size, and shape (e.g., cc pabilities, hormonal or endocrine levels, appetite, libido, memory, or creases; increases or decreases storage capabilities, fat content, lipid, components. This sequence encodes a novel human musculoskeletal system cc printed specification, but was obtained in electronic format directly

The invention relates to a novel isolated musculoskeletal system-associated nucleic acid molecule. The nucleic acid of the invention demonstrates cytostatic and osteopathic activities and may be useful for preparing a medicament for preventing, treating or ameliorating a medical condition such as cancer of the musculoskeletal tissues or osteoporosis, possibly via gene therapy or vaccine production. The current sequence is that of the human musculoskeletal system-associated genomic DNA of the invention. The current sequence is not shown within the specification per se but is available on the USPTO web-site http:seqdata.uspto.gov/sequence.html?DocID=20040009488.

Sequences AAS29931-AAS30164 represent genomic DNA molecules, which ence the lung antigen polypeptides of the invention. Lung antigen polypeptil and their associated polynucleotides are useful in the diagnosis, treatment and prevention of various types of disorders in e.g. humans, mice, rabbits, goats, horses, cats, dogs, chickens or sheep. A pathological condition can be determined by detecting the presence or absence of a mutation in a lung antigen polynucleotide. The treatable disorders include autoimmune diseases such as rheumatoid arthritis, hyperproliferative disorders such as neoplasms of the breast or liver, cardiovascular disorders such as cardiac arrest, cerebrovascular disorders such as cardiac arrest, cerebrovascular disorders such as cerebral ischaemia, nervous system disorders such as Alzheimer's disease, infections caused by bacteria, viruses and fungi,
                                                                                                                                                                                                                                                                                            Isolated polypeptide for treating, preventing and/or prognosing respiratory disorders related to the lung including lung cancers for testing and detection e.g. diagnosis.
                                                                                                                                                                                                                                                           Claim

The polypeptides can also be used to aid wound healing, to prevent skin aging due to sunburn, to maintain organs before transplantation, to regenerate tissues and in chemotaxis. The polypeptides can also be used as a food additive or preservative to increase or decrease storage capabilities. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published pct sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             immunodeficiency; X linked agammaglobulinaemia;

The invention relates to an isolated lung antigen polypeptide sequence or encoded sequence in a cDNA clone. The polypeptide and its polynucleotide are useful for treating, preventing, diagnosing and/or prognosing diseases and/or disorders such as pathological cell proliferative neoplasias e.g. acute myelogenous leukaemias, adenocarcinoma; respiratory disorders such as chronic rhinitis, sinusitis; immunodeficiencies such as x-linked agammaglobulinaemia; inflammatory disorders such as drenalitis, alveolitis; immune complex diseases such as serum sickness, polyarteritis nodosa; bleeding disorders such as thrombocytopenia, von Willebrand's disease; acquired platelet dysfunction such as kidney failure, multiple myeloma; disorders associated with macrophage numbers and/or macrophage function such as Gaucher's disease, Neimann-Pick disease; tumours such as colon cancer, pancreatic cancer; renal disorders such as kidney failure, nephritis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 17-NOV-2000;

                                                                                                                                                                                       The invention relates to a method for identifying a molecule involved in lipid regulation comprising identifying a molecule that binds to or inhibits binding of a molecule to high bone mass (HBM) or its wild type gene, Zmax1. Compounds identified by the method are useful for treating, diagnosing, preventing or screening for normal and abnormal lipid-associated conditions, including arterioscleris, cardiovascular disease, stroke, and osteoporosis. The compounds may also be used in the treatment or prevention of diabetic atherosclerosis, neurovascular conditions caused by plaque build-up, poor circulation due to plaque build-up and associated poor wound-healing. The methods may be used in gene therapy, pharmaceutical development, and diagnostic assays for bone development disorders. Molecules identified by comparison of Zmax1 and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Identifying molecules involved in lipid regulation, useful for diagnosing, treating or preventing e.g., arteriosclerosis, comgidentifying a molecule that binds to high bone mass gene or its corresponding wild type gene.
                                                                                        HBM systems can be used as surrogate markers in pharmaceutical development, in diagnosis of human or animal bone disease, and in treatment of bone diseases. Sequences ABK23776-ABK33411 represent
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   lipid-associated condition; arteriosclerosis; cardiovascular disease; ss; osteoporosis; atherosclerosis; diabetic atherosclerosis; plaque build-up; neurovascular condition; wound healing; gene therapy; PCR primer; probe;

                                                                                                      맑
                                                                                                                                           S
                                                                                                                                                                                                                                                                         The present invention relates to novel DNA and protein sequences which care associated with carcinomas. The sequences are useful for: (i) for screening drug candidates; (ii) for screening of bioactive agent capable of binding to Carcinoma Associated Protein (CAP); (iii) for screening of a bioactive agent capable of modulating the activity of CAP; (iv) for carcinoma; (vi) for inhibiting the activity of CAP; (vi) for treating carcinoma; (vii) for neutralizing the effect of CAP; (vii) for treating carcinoma; (viii) for neutralizing the effect of CAP; (ix) as a biochip; (cx) for diagnosing carcinoma or a propensity to carcinoma; and (xi) for determining Carcinoma associated (CA) gene copy number. In addition, the CA genes are useful as DNA vaccines and the CAP are useful as markers of carcinoma including lymphoma. The present sequence is one such CA coding sequence. Note: This patent is an equivalent to basic patent
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Query Match

The sequences are useful for: (1) for screening drug candidates; (11) for screening of binactive agent capable of binding to Carcinoma Associated Protein (CAP); (111) for screening of a bioactive agent capable of modulating the activity of CAP; (1v) for evaluating the effect of a candidate carcinoma drug; (v) for diagnosing carcinoma; (vi) for inhibiting the activity of CAP; (vii) for treating carcinoma; (vii) for nhibiting the activity of CAP; (vii) as a biochip; (x) for diagnosing carcinoma or a propensity to carcinoma; and (xi) for determining Carcinoma Associated (CA) gene copy number. In addition, the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   determining Carcinoma Associated (CA) gene copy number. In addition, the CA genes are useful as DNA vaccines and the CAP are useful as markers of carcinoma including lymphoma. The present sequence is one such CA coding sequence. Note: This patent is an equivalent to basic patent US2002182586A1, for which no sequence data was published
Human; Chromosome 5; ds; gene; ADAM19; Endophilin 1; Endophilin 2; NRG2; ADAMTS2; a disintegrin and metalloprotease; neuroregulin 2; SNP; single nucleotide polymorphism; a disintegrin and metalloprotease with thrombospondin type1 motif 2; a sthma; atopy; obesity; inflammatory bowel disease; respiratory disorder.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Recombinant nucleic acid useful for diagnosis and treatment comprises a nucleotide sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      01-MAR-2002; 2002US-00087192
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Cytostatic; carcinoma; lymphoma; cancer; human; gene; ss

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ភិស្តិស្ត្រស្តិស្ត្រស្ត្រស្ត្រស្ត្រស្ត្
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 CC amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic CC activity, and can be used in gene therapy and vaccine production. (I) CC proteins and polynucleotides may be used in the prevention, diagnosis and CC treatment of diseases associated with inappropriate (I) expression. For CC example, they may be used to treat disorders associated with decreased CC expression by rectifying mutations or deletions in a patient's genome CC that affect the activity of (I) by expressing inactive proteins or to CC supplement the patients own production of (I). Additionally, (I) CC polynucleotides may be used to produce the secreted (I), by inserting the CC nucleic acids into a host cell and culturing the cell to express the CC protein. (I) proteins and polynucleotides may be used to prevent, CC diagnose and treat immune/haematopoietic-related diseases, especially CC cancers and cancer metastases of haematopoietic artigen genomic CC sequences from the present invention. AAK54942 to AAK54950 and AAM82169 CC represent sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Best Local Similarity

Nucleic useful for for preventing, acids encoding human immune/hematopoietic antigen polypeptides, for preventing, diagnosing and/or treating cancers and metastasis.

Disclosure; SEQ ID ŏ 32015; 3071pp + Sequence Listing; English.

CC amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic contivity, and can be used in gene therapy and vaccine production. (I) crotesins and polynucleotides may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate (I) expression. For ceample, they may be used to treat disporders associated with decreased cexpression by rectifying mutations or deletions in a patient's genome cc that affect the activity of (I) by expressing inactive proteins or to concert affect the patients own production of (I). Additionally, (I) colored colo

                                                                                                                                                                                                                                                                                               5
                                                                                                                                                                                                                                                                                                                                                                                                                                  CC amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic contivity, and can be used in gene therapy and vaccine production. (I) cc proteins and polynucleotides may be used in the prevention, diagnosis and ct treatment of diseases associated with inappropriate (I) expression. For cc example, they may be used to treat disorders associated with decreased cexpression by rectifying mutations or deletions in a patient's genome ct that affect the activity of (I) by expressing inactive proteins or to complement the patients own production of (I). Additionally, (I) cc polynucleotides may be used to produce the secreted (I), by inserting the cc protein. (I) proteins and polynucleotides may be used to prevent, cc diagnose and treat immune/haematopoietic-related diseases, especially cc cancers and cancer metastases of haematopoietic-derived cells. AAK64703 cc anters and cancer metastases of haematopoietic antigen genomic concers from the present invention. AAK54942 to AAK54950 and AAM82169 crepresent sequences used in the exemplification of the present invention of the present invention.
                                                                                                                                                                                                                                                                                                                                       Query Match

(I) have cytostatic activity, and can be used in gene therapy and vaccine production. (I) proteins and polynucleotides may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate (I) expression. For example, they may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of (I) by expressing inactive proteins or to supplement the patients own production of (I). Additionally, (I) polynucleotides may be used to produce the secreted (I), by inserting the nucleic acids into a host cell and culturing the cell to express the proteins and polynucleotides may be used to prevent, diagnose and treat immune/haematopolistic-related diseases, especially
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               cancers and cancer metastases of haematopoietic-derived cells. AAK64703 to AAK87694 represent human immune/haematopoletic antigen genomic sequences from the present invention. AAK54942 to AAK54950 and AAM82169 represent sequences used in the exemplification of the present invention
                                                                                                                                                                                                                                                                         09-AUG-2001.

useful f
AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I) amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic activity, and can be used in gene therapy and vaccine production. (I) proteins and polynucleotides may be used in the prevention, diagnosis an treatment of diseases associated with inappropriate (I) expression. For example, they may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of (I) by expressing inactive proteins or to supplement the patients own production of (I). Additionally, (I) polynucleotides may be used to produce the secreted (I), by inserting the nucleic acids into a host cell and culturing the cell to express the protein. (I) proteins and polynucleotides may be used to prevent,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to a nucleic acid array for detecting a cancer associated (CA) nucleic acid, comprising two or more nucleic acid probes. The invention also relates to a peptide array comprising two or more isolated polypeptides encoded by a CA nucleic acid sequence, a compound that binds to a polypeptide, an isolated antibody or its fragment which binds to a polypeptide, which is prepared by immunizing a host animal with a composition comprising the polypeptide or its antigen binding fragment and collecting cells from the host expressing antibodies against the antigen or its antigen binding fragment, a composition comprising the antibody and a carrier, a method of screening for anticancer activity, a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          diagnose and treat immune/haematopoietic-related diseases, especially cancers and cancer metastases of haematopoietic-derived cells. AAK64703 to AAK87694 represent human immune/haematopoietic antigen genomic sequences from the present invention. AAK34942 to AAK34950 and AAM82169 represent sequences used in the exemplification of the present invention
method of detecting a CA nucleic acid, a method of diagnosing cancer, a method of treating cancer and a method of inhibiting expression of a CA nucleic acid in a cell. The CA nucleic acids are useful for detecting CA nucleic acids. The antibody is useful for detecting the presence or absence of cancer cells in an individual which involves contacting cells from the individual with the antibody and detecting a complex of a CA protein from the cancer cells and the antibody, where the detection of the complex correlates with the presence of cancer cells in the individual. The composition is useful for inhibiting growth of cancer cells in an individual or for delivering a therapeutic agent to cancer cells in an individual. The invention is also useful for diagnosing cancer, for treating cancer and for inhibiting expression of a CA gene in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Disclosure; SEQ ID NO 938; 198pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Nucleic acid array useful for detecting cancer associated nucleic acid, comprises two or more nucleic acid probes.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ន្តន្តន្ត
                                                    target. Specifically, it refers to the guanine-nucleotide exchange factor (GEF) named P-Rexl, which has also been identified as a ghosphatidylinositol(3,4,5)P3-sensitive activator of Rac (a monomeric CP phosphatidylinositol(3,4,5)P3-sensitive activator of Rac (a monomeric CP phosphatidylinositol(3,4,5)P3-sensitive activator of Rac (a monomeric CP phosphate). Accordingly, P-Rexl can be described as having Rac-GEF activity and is adapted to function downstream of activation of heterotrimeric GP proteins in neutrophils. The present invention describes this protein as CP ceducing or inhibiting inflammation, metastasis, septic shock, reducing or inhibiting inflammation, metastasis, septic shock, corrected activities including antiinflammatory, cytostatic, annibacterial, cactivities including antiinflammatory, cytostatic, antibacterial, correction or attended antiarteriosclerotic. Furthermore, the protein or its mutant, the nucleic acid or appropriate antibody may compared in a screening assay to identify a modulator of P-Rexl binding, activity or expression. This polynucleotide is the human P-Rexl genomic CP DNA sequence of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ARK54951 to ARK64702 encode the human immune/haematopoietic antigen (I) CC amino acid sequences given in ARM62170 to ARM91921. (I) have cytostatic CC activity, and can be used in gene therapy and vaccine production. (I) CC proteins and polynucleotides may be used in the prevention, diagnosis and CC treatment of diseases associated with inappropriate (I) expression. For CC example, they may be used to treat discrete associated with decreased CC expression by rectifying mutations or deletions in a patient's genome CC that affect the activity of (I) by expressing inactive proteins or to CC supplement the patients own production of (I). Additionally, (I) CC polynucleotides may be used to produce the secreted (I), by inserting the CC nucleic acids into a host cell and culturing the cell to express the protein. (I) proteins and polynucleotides may be used to prevent, CC diagnose and treat immune/haematopoietic-derived cells. ARK64703 CC cancers and cancer metastases of haematopoietic antigen genomic CC sequences from the present invention. ARK54921 to ARK8950 and ARM82169 CC cancers are supplied in the accentification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                    Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 CC amino acid sequences given in AAM82170 to AAM91921. (I) have cyrostatic cartivity, and can be used in gene therapy and vaccine production. (I) CC arctivity, and can be used in gene therapy and vaccine production. (I) CC proteins and polynucleotides may be used in the prevention, diagnosis and CC treatment of diseases associated with inappropriate (I) expression by rectifying mutations or deletions in a patient's genome CC expression by rectifying mutations or deletions in a patient's genome CC supplement the patients own production of (I). Additionally, (I) CC supplement the patients own production of (I). Additionally, (I) CC polynucleotides may be used to produce the secreted (I), by inserting the CC nucleic acids into a host cell and culturing the cell to express the CC protein. (I) proteins and polynucleotides may be used to produce the segment to prevent, CC diagnose and treat immune/haematopoietic-related diseases, especially CC cancers and cancer metastases of haematopoietic antigen genomic CC sequences from the present invention. AAK84920 and AAM82169 CC sequences from the present invention. AAK84921 to AAK84950 and AAM82169
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Query Match

AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I) amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic activity, and can be used in gene therapy and vaccine production. (I) proteins and polynucleotides may be used in the prevention, diagnosis are treatment of diseases associated with inappropriate (I) expression. For example, they may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of (I) by expressing inactive proteins or to supplement the patients own production of (I). Additionally, (I) polynucleotides may be used to produce the secreted (I), by inserting the nucleic acids into a host cell and culturing the cell to express the
                                                                                                                                                                                                                         Disclosure;

CC acid sequences from mouse and human (ADA)1482-ADA)3094), and to CC recombinant carcinoma associated proteins (CAP) encoded by them. The CC invention also encompasses expression vectors and host cells comprising a CC Anucleic acid, a polypeptide (especially an antibody) that specifically binds to the protein, and a biochip comprising CA nucleic acid or CC fragments thereof. The sequences of the invention were identified using CC oncogenic retroviruses, which insert into the genome of the host organism CC at random. Many of these do not carry transduced host oncogenes or pathogenic trans-acting viral genes, meaning that cancer incidence is a CC direct consequence of the effects of proviral integration into host protooncogenes. The CA nucleic acid sequences can be used to diagnose CC carcinoma (especially breast cancer, prostate cancer, lymphoma or leakaemia) or a propensity to carcinoma by determination of the sequence of a CA gene, or by determination of CA gene expression in particular CC tissues. CA nucleic acids, proteins and antibodies are also useful as therapeutic agents and in screening and evaluating drug candidates. The C present sequence represents a specifically claimed human CA nucleic acid sequence of the invention. Note: The complete sequence data for this complete sequence data for this sequence of the invention. Note: The complete sequence data for this complete sequence data for this cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Query Match

(I) proteins and polynucleotides may be used to prevent, diagnose and treat immune/haematopoietic-related diseases, especially cancers and cancer metastases for haematopoietic-derived cells. AAK64703 to AAK87694 represent human immune/haematopoietic antigen genomic sequences from the present invention. AAK54942 to AAK54950 and AAM82169 represent sequences used in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence 4317 BP; 1270 A; 791 C; 831 G; 1425 T; 0 U; 0 Other;

                                                                                                                                                                                                                                                           The invention relates to a novel recombinant nucleic acid comprising a nucleotide sequence selected from any of the 660 sequences fully defined in the specification. A polynucleotide of the invention has cytostatic activity, and may have a use in gene therapy, or in a vaccine. The recombinant nucleic acids and polypeptides are useful for treating carcinomas, e.g. lymphomas, cancers, neoplasm, adenocarcinoma, and may have a rescuence represents a human gene of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 02-MAR-2001; 2001US-00798586.

The compositions of the invention may have cytostatic activity whilst the disclosed sequences may be useful for gene therapy. The carcinoma associated nucleic acids and proteins are useful for diagnosing and treating carcinomas, for example lymphoma, breast cancer, prostate cancer or leukaemia, or for screening drug candidates or bioactive agents capable of binding to, or modulating the activity of, a carcinoma associated protein. The present sequence is the genomic DNA sequence of the human MDM2 gene which is a carcinoma

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   CC nucleic acid sequences useful as a biomarker for a disease to be competited acid sequences useful as a biomarker for a disease to be comprising comethylated (M1) involves identifying nucleic acid sequences comprising comethylated in diseased cells, comparing expression level of nucleic acid sequences with that of demethylated nucleic acid sequences and comparing expression level of nucleic acid sequences exhibiting increase in expression comparing comparing expression level of nucleic acid sequences and comparing expression of a disease in a subject, which involves determining the degree of methylation of one or more CpG sites on nucleic acid sequences in a composition to, or stage of the disease in the subject based on the degree of methylation; (2) monitoring the onset, progression, or compound for inhibiting a disease in the subject based on composition to or expression of a disease in a subject; (3) determining the efficacy of a composition of a disease in a subject; and (4) a kit (1) composition of a disease in a subject; and therapeutic compound for inhibiting a disease in a subject; and (4) a kit (1) composition of a disease in a subject; and therapeutic treatment of a disease. (M1) is useful for identifying one or more composition to a subject; and therapeutic composition of a disease useful for identifying one or more composition. The present sequence sequences are useful for detecting, the present sequence represents a specifically claimed human composition. The present sequence represents a specifically claimed human control of the invention. Note - The sequence data for this patent is not represented in the printed control of the composition but was obtained in electronic format from the USPTO web
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention relates to novel DNA and protein sequences which are associated with carcinomas. The sequences are useful for: (i) for screening drug candidates; (ii) for screening of bloactive agent capable of binding to Carcinoma Associated Protein (CAP); (iii) for screening of a bloactive agent capable of modulating the activity of CAP; (iv) for evaluating the effect of a candidate carcinoma drug; (v) for diagnosing carcinoma, (vi) for inhibiting the activity of CAP; (ii) for tracting carcinoma; (viii) for neutralizing the effect of CAP; (vii) for tracting; (x) for diagnosing carcinoma or a propensity to carcinoma, and (xi) for determining Carcinoma accinoma or a propensity to carcinoma. In addition, the CA genes are useful as DNA vaccines and the CAP are useful as markers of carcinoma including lymphoma. The present sequence is one such CA coding
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Recombinant nucleic acid useful for diagnosis and treatment of carcinoma comprises a nucleotide sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              WPI; 2003-328604/31
